enviraᵀᴹSAFE

Imagine your Infection Prevention Data Ecosystem in One Integrated Environment

Harness your infection related data in our comprehensive data platform to make informed decisions that lower infection rates and increase your bottom line. With the consolidated, visual intelligence enviraᵀᴹPanel provides, reduce your facilities litigation risks and operating costs and increase your employee safety while improving your business reputation in today's hyper sensitive infection prevention atmosphere. The enviraᵀᴹSafe family provides a baseline platform that can be adopted to your specific ecosystem. It captures and integrates your business information such as inspection and audit tracking, disinfection and cleaning activity modeling, training and competency assessment, facility drawings and room inventory, and other proprietary data.

"infection prevention insight and actionable data at your fingertips"

This creates a visual infection prevention dashboard with all your infection prevention data in one place. New views and modeling of your data in a single tool provides insight you won't find from any other system. A few examples of the knowledge enviraᵀᴹPanel can generate include efficacy of cleaning and disinfection products over time, detection of employees who need training, and identification of potential savings for each individual facility.

"validate the safety of your business environments"

By managing and visually analyzing the entire infection prevention ecosystem with enviraᵀᴹPanel, infection prevention decision support has never been easier.

enviraᵀᴹPanel visual dashboard turns all your infection prevention data into priceless business insight.

In this new critical era, efficient analysis of all your infection prevention data, including new technologies, is a requirement for success.

We can integrate data from science-based quantifiable efficacy technologies including **microbiological swab** testing, **bioluminescence** and other emerging methods that provide truly quantifiable measurements of your facilities' environmental scoring.

Data from device manufacturers including UV robot disinfection devices, fogger and misting devices and many other mobile devices can also be integrated to provide an auditable view on the disinfection events a facility has performed.

Key enviraPanel Benefits

Model Savings of New Products & Infection Prevention Programs

Use the ROI tool to identify potential savings from reducing infections. Dynamically explore "what if" scenarios using your facilities' actual data and known reduction targets.

Access and Manage Staff Competencies

With integrated learning featured, reduce costs with proactive learning enrollment and corrective action planning to improve infection prevention knowledge.

Capture and Entrust Auditable Tasks and Disinfection Events

Audits can lead to unexpected costs when not properly tracked. We manage staff quality audits, disinfection events, and other ledger-enabled transactions captured by mobile or paper form.

Drill Down with Geomapping for Easy View of Individual Facility Status

Use the geomapping features to view multiple facility locations within your parameters. Color coding of each facility can indicate alters of your choosing.

Manage Room Disinfection Activity and Assets

envira™Panel can help manage infection prevention activity and assets associated with your ecosystems, buildings, and rooms.

Make Informed Lifesaving Decisions

Efficiently access information that reduces infections and ultimately saves lives. Fewer infections lead to lower malpractice risk, lower penalties, and higher cost savings.
